

TEN REASONS WHY WE CAN SUCCESSFULLY REALISE YOUR RECEPTION DESK

1. We can commence the process of quoting for your reception desk from a number of start points. You may have a fully developed 3d CAD model or a set of 2d CAD drawings enabling us to provide an accurate quotation very quickly. Or you may be in the early concept stages in which case we can provide a full design service from scratch or develop you drawings/ ideas further.

2. With a clear understanding of a design concept we can often value engineer a project deemed to be 'too expensive' to keep it well within budget.
3. Complexity of design is not a problem, we can produce any shape you can imagine. Using solid surface material we can make very detailed intricate surfaces up to large scale thermoformed double curvature panels.
4. Don't worry about the structure of the desk, we can design and make a suitable cabinet/ support structure. It's important to consider all elements of the desk as a whole for a successful project.

- Our 3d modeling software allows us to develop design outcomes with parametric control. This opens up a new world for designers to explore. Surface patterns and textures are possible that would otherwise be beyond designers capabilities.

- Our project management team have a constant dialogue with our production team allowing us to deliver consistently on time.
- For 25 years Cutting Edge has been at the forefront of pushing the boundaries of solid-surface material. We constantly invest our time in exploring new fabrication techniques.
- Feel free to use other material in the design of your desk. We have a reliable and trusted list of suppliers we work with for other materials such as metalwork, glass, lighting etc. As well as solid surface material fabrication we process all timber parts in-house.
- We have a number of CNC machines with dedicated operators that enable us to process parts fast and efficiently. All CNC processes are managed through a cloud based system so that project managers have a constant feed-back from the workshop.

ID	Part Name	Material	Quantity	Status	Order Date	Order Ref	Order Qty	Order Unit	Order Status	Order Type	Order Source

- The final installation of a reception desk requires an experienced team that not only understands the construction of the desk but has a solid background in solid surface fabrication.
